Last chance to register for free webinar on CHP

Wednesday 20 November 2013; *8.00am PST, 11.00am EST, 5.00pm CET*

Don't miss out! There are just a few days left to register for our free webinar on jumpstarting combined heat and power (CHP) initiatives in the US. CHP involves recovering the heat normally lost in power generation and using it to provide useful thermal energy to businesses and factories.

This webinar – the third in a series by the Institute for Industrial Productivity (IIP) and the Clean Energy Solutions Center (CESC) – will look at how policymakers and industry are now starting to see the environmental and business benefits of CHP, and a new market is being created in its wake.

The webinar will explore how federal and state governments are leading promotional efforts to increase the use of CHP, look at specific policy actions, and showcase the work of two states that have developed innovative approaches to increase CHP.

Register now: https://www3.gotomeeting.com/register/709153238

Speakers: Katrina Pielli, Senior Policy Advisor at the US Department of Energy; Michael Worden, the Chief of Electric Distribution Systems at the NY Department of Public Service; and Dwayne Breger, Director of Renewable and Alternative Energy Development at the Massachusetts Department of Energy Resources. Bruce Hedman, IIP's Technical Director, will moderate the session and give a presentation on the CHP landscape in the US.

Established in 2010, IIP is an independent non-profit organization whose role is to accelerate the uptake of energy efficiency practices amongst industry. It is the only global organization solely dedicated to helping reduce industrial energy use to mitigate climate change and address other relevant environmental issues. IIP has a global team and network of independent experts that provide advice on technology, policy and financing of industrial energy efficiency.
